

Missouri LEPP Pilot Program

Please check back regularly as we update our FAQs about the pilot project!

LEPP Questions:

- Liability: Liability for the phlebotomist belongs to the agency that employs the phlebotomist. Agencies should check with their insurance companies regarding any issues they may have with this. If you need assistance with this, the NHTSA Phlebotomy Toolkit has information on risk and liability and how to address this.
- https://www.nhtsa.gov/sites/nhtsa.gov/files/documents/14222-phlebotomy_toolkit_final-032819-v1a_tag_0.pdf
- According to the Moberly Area Community College (MACC) program requirements, final acceptance and enrollment will be contingent upon the following:
 - o Background Check
 - o General Health Physical by Medical Provider
 - o 10+ Panel Drug Screen with negative results
 - o Immunizations (TB and others)
 - o Other requirements as determined by MACC and the assigned clinical location
- Requalification training will take place every two (2) years.
- Is the online training full time or can I work my regular job while completing it?
 - o The online six weeks of training is not a full-time endeavor. You will have assignments, quizzes, activities, and potentially discussion boards you will have to complete in required time frames but you can do it at your convenience (i.e., 2:00 am, 11:00 pm, etc). You just have to make the commitment to meet the deadlines and complete the requirements as directed by the instructor.
